

# Data with a Difference

WideTech

BETTER DATA | BETTER PERFORMANCE | BETTER BUSINESS

## OUR PRODUCT **WiDE**

**WiDE** is an innovative data processing software that efficiently fills the gap between raw process data and high added-value information and knowledge of process performance. Fully integrated in your IT structure, it takes raw process data, improve it and then provide the corrected data to other applications within your organization.

It is easy to use and fully modular: different users can have different parts of the software available as well as different reports depending on their need. It is a robust software, developed as an industrial IT application that meets the constraints of reliability and availability.

With its ease of use and low maintenance required, the total cost of ownership is very low. Built using the latest web technologies, the communication protocols are standardized and **WiDE** can automatically provide other application with validated, corrected data.

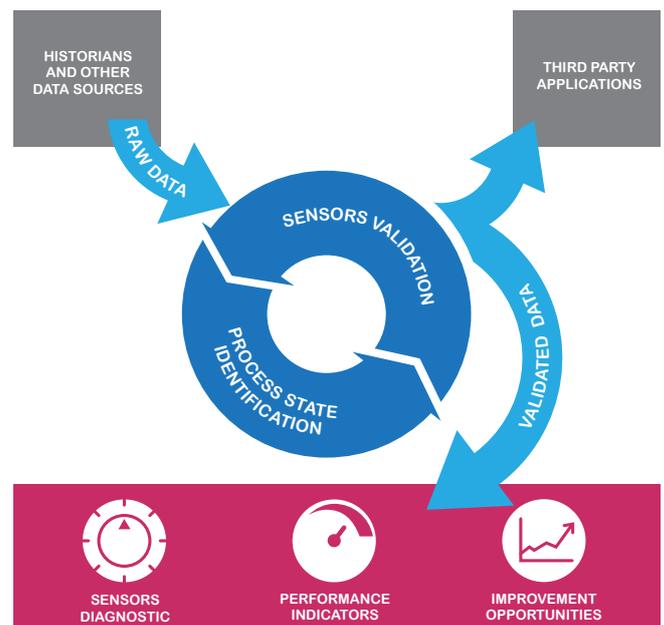

**w** WideTech

### BETTER DATA, BETTER PERFORMANCE, BETTER BUSINESS

We help improve the reliability and accuracy of process data. Having better data **can really make a difference** in the profitability of your assets.

- w** **Clearer**, more accurate view of your process performance
- w** **Faster detection** of deviations and issues
- w** **Easier to identify** improvement opportunities
- w** **Better allocation** of production

### HOW IT WORKS

#### In a nutshell WiDE :

- w** **is easy to use** and maintain, through its web interface,
- w** **provides improved data** to third party applications,
- w** **is based on a modular approach**, in order to serve different types of users,
- w** most importantly, **provides insight to your process performance** and recommendations on how to improve it.

### OUR MISSION

It is our mission to help the oil and gas industry enhance their performance by:

- w** **improving the maintenance** of instrumentation and equipment
- w** **monitoring process performance** and taking early action in case of deviations
- w** **providing accurate production accounting data** – both for allocation and reservoir models
